PulseGo Pro

Mock Business Scenario – Fitness App

Stage 1: Users, Motivations, and Goals

Stakeholders

Group 1: Executive Leadership	Group 2: Product & Development Team	Group 3: Users & Community
Chief Executive Officer	App Developers	Fitness Enthusiasts
Chief Marketing Officer	UX Designers	Personal Trainers
Product Director	Data Scientists	Fitness Influencers
Chief Financial Officer	Content Creators	Health & Wellness Media

What message are we communicating?

- PulseGo Pro gives everyday people a mobile personal fitness coach. The app learns from your body, adapts to one's schedule, and guides the user toward real results. Whether you are at a beginner level, or an expert trying to break through a plateau, PulseGo Pro meets your needs and elevates you to your own personal goals.

What does success mean for this project?

- A growing base of daily users who tend to use the app consistently for the proper active lifestyle.
- Strong and fair premium subscription amenities compared to free-tier users.
- Positive app-store reviews and referrals
- Measurable improvements in user fitness experience based on in-app data.
- Established brand recognition in a competitive fitness brand market.

How do we set realistic and measurable goals?

- Reach over 45,000 app downloads within 90 days of launch.
- Achieve a 4.5-star or higher rating on the App Stores.

- Maintain 20 – 25% users having a paid subscription within 6 months.
- Grow our social media platform following by 30% in 6 months.

Business Goals

- Grow PulseGo Pro's paying subscriber base / have monthly recurring revenue.
- Establish correct target age group between busy adult ages 18 – 40.
- Build a loyal fitness community centered around the PulseGo brand.

Business Tactics

- Partner with fitness influencers on social media for sponsored content.
- Launch referral codes that reward existing and new users.
- Run paid advertising on Video streaming platforms interested in fitness.

Project Objectives

- Design a clean, mobile-friendly home page that communicates the app's main use and value.
- Bring new users through raw downloads or from digital advertising.
- Highlight user's success and transformations to build credibility.

Project Requirements

- Responsive and user-friendly screens for mobile and desktop applications.
- User testimonial section with real results and photos.
- Privacy policy, terms of service, etc.
- Email communication for early access, news, and announcements.

Audience

Primary Audience – Active Adults (Ages 18 – 40)

People who tend to have a schedule built around their daily activities. This can be for the people who either have the time to exercise or struggle with time and consistency, plateau-breaking, or building a structured plan on their own. People can be motivated but often overwhelmed by too many options and too little time.

Secondary Audience – Fitness Beginners

People who are new to working out and seek proper guidance. Beginner-friendly plans that do not require complex equipment or a personal trainer. They find motivation from clear and simple structure.

Tertiary Audience – Personal Trainers and Health Coaches

Fitness professionals who may recommend the app to clients or even use it in their own sessions. Usability and flexibility for a coaching tool.

Empathy Map – Primary Audience

Think + Feel - Want to see real and measurable progress. - Frustration from generic workout plans. - Worried about injury or burnout. - Motivated by higher ceilings.	See - Fitness content through video streaming platforms and social media. - Friends posting results. - App promos and insight through influencers.	Pains - Generic plans that are time vulnerable. - Hitting plateaus with no clear path forward. - Confusing and cluttered features. - Lack of recovery expectations.
Say + Do - Tracks workouts manually or with tools. - Talk about wanting a more personalized routine. - Sets and sticks to goals through each year.	Hear - Recommendations from active influencers. - Health and fitness podcast promo. - App store reviews and ratings for main page visibility.	Gains - A plan that fits user lifestyle. - Knowing when to step up the work effort. - Knowing when to rest and recover. - Measurable progression.

Context

Our audience will consist of people who are interested in fitness and wellness apps for their own daily and personal use. Three key factors help narrow down our categories: lifestyle, device access, and motivation type.

- Factor 1: Time-Constrained Lifestyle

- Our target users are young adults who want efficient and structured workouts that can be implemented into a full schedule. Also, when there is no time to plan workouts from scratch and with outside research.
- Factor 2: Mobile Dependency
 - Nearly all users will be relying on mobile devices as a primary tool for managing their day. A mobile-friendly app fits into how they already live and work.
- Factor 3: Desire for Customization
 - The desire for a more upgraded workout app. They want something that adapts to them specifically and offers multi-customization features.

Stage 2: Analysis and Structure

Scenario

New User Onboard	Daily Workout Session	Weekly Progress Review
A first-time user downloads the PulseGo Pro app, completes their fitness profile, and receives an AI – generated workout plan tailored to their goals, availability, and current fitness level.	A returning user opens the app, sees their workout for the day and progression, tracks their sets/ reps in real time, and receives feedback and a recovery score needed at the end of each session.	At the end of the week, a user reviews their progress dashboard and receives recommendations for recovery. The system then adjusts their plan for the following week based on performance data.

Scenario 1: User Journey

1. User sees the PulseGo Pro ad post from an influencer on Instagram or TikTok
2. User taps the link and referral code, lands on the PulseGo App download from the store
3. User reads the feature highlights and looks at reviews
4. User downloads app and opens it onto the welcome / home screen
5. User completes the short survey to measure current stand in fitness, goals, schedule, and equipment access
6. AI system generates personalized weekly workout plan
7. User completes their first guided workout and receives a post-session summary

8. User receives a push notification option for daily reminders on planned workouts to continue the streak and consistency

Information Structure

Home / Welcome screen

Lists Today's Workout summary, weekly progress ring, recovery score, and quick-add workout tracker.

Workouts

Brows plans, My Plan, Exercise Library with video examples

Track

Log Workout (in-session tracking), Body Stats and history, Sleep and Recovery data scores

Community

Leaderboards, Friends activity, Challenges

Profile

Fitness Goals, App Settings, Subscription management, Privacy controls

Wireframe

Screen 1: Getting step PulseGo logo at the top of the screen with a welcoming headline. Step progress indicator (1 of 4): Input: Fitness goals (dropdown) Input Workouts per week (slider) Input: Equipment access (search)	Screen 2: Home Screen Greeting: 'Welcome back, ____'. Navigation at bottom of screen: Home / Workouts / Track/ Community / Profile	Screen 3: Workout Detail Workout title and estimated duration. Exercise list with set/rep targets Checkboxes per set for completion. Rest timer (Manual starts between sets). Clickable 'Finish Workout' button.
---	---	--

Stage 3: Guides, Templates, and Workflows

Voice and Tone

PulseGo Pro AI is customized to prompt like a knowledgeable and supportive coach. It pushes you when you need it and backs off when you don't. It also makes sure that it adjusts based on how the user feels they are progressing through each workout. It is introduced with stylizes and modern lingo for users to be able to understand certain terms within the gym community. Vocabulary is often necessary when it comes to understanding the depth of an exercise or routine, so this enables the user to be explained how things work.

Style Guide

Content Example:

Push Notification	Your body is ready. Today's lift is waiting!
Introduction screen headline	Tell us about yourself. We'll handle the rest.
Re-engagement tool	You skipped yesterday's session. That is fine, here is how to step back into routine.
App Store Description	PulseGo Pro offers proper structure to plan workouts around your life. Your time. Your goals.
In-App Recovery Guide	Your recovery score today is 71. A lighter session today will set you up better for tomorrow.

Interaction Template – Beginning Survey

Field	Type / Options
First Name:	Input Text field
Primary Fitness Goal:	Dropdown: Lose Weight / Build muscle / Improve endurance / Stay active / Reduce stress / HITT
Frequency per week:	Slider: 1 – 7 days
